Chad Koslovsky

Infrastructure that engineers can build on

Milliken, Colorado · chad@koslovsky.xyz

Senior Infrastructure Engineer | Atom Computing

01 PROFILE

Systems engineer and hands-on builder with experience across an ISP, enterprise infrastructure and long-term client environments. I connect Linux operations, container delivery and repeatable automation with the monitoring, recovery work and direct support needed after a system goes live.

02 EXPERIENCE

Founder / Product Engineer / Systems Lead · Technomancy IT LLC | 2015-Present

Own application and infrastructure delivery for client systems, including container-based releases, access controls, SQL migrations, health checks and ongoing support.

Build practical deployment and restore-verification tooling around the services I operate.

Senior Systems Engineer / Datacenter Architect · Front Range Internet Inc. | 2015-2020

Led the NOC and systems work across a multiyear ISP tenure, including lead-engineer responsibility during a company purchase and a later year as sole systems engineer.

Migrated workloads from Hyper-V and VMware ESXi to Docker and Kubernetes, upgraded servers and firewalls, and codified infrastructure with Terraform and Ansible.

Ran SOC 1 and SOC 2 audits; handled escalations, monitoring, recovery verification and operating procedures.

Systems / Software Engineer · Office Evolution | 2014-2015

Built centralized SQL- and MongoDB-backed systems connecting provisioning, onboarding, CRM and service operations across locations.

Network & Systems Engineer · PlumChoice / Everon | 2012-2014

Engineered and supported networks and systems across managed-service clients, with remote monitoring, diagnostic tooling and on-call response.

Worked directly with business owners and end users, including endpoint support and antivirus services.

Infrastructure and Systems Focal · IBM | 2010-2012

Operated shared enterprise infrastructure, hosted desktops and virtualization labs; automated audit and backup workflows and coordinated incidents and production changes.

03 SELECTED WORK

Technomancy IT | Delivery and recovery tooling · Own technical practice and platform

Built versioned container-delivery tooling with migration, health and HTTP checks, plus a separate disposable-database restore-verification workflow.

Excell Services | Legacy infrastructure modernization · Technomancy IT client in Wray

Modernized servers, employee computers and networks, and connected a satellite location with VPN, Windows Server and Active Directory.

04 CAPABILITIES

Linux servers, Windows environments and virtualization · Docker, Kubernetes, Terraform and Ansible · AWS and Azure infrastructure; networks and access controls · CI/CD, GitHub Actions, Python and shell automation · Monitoring, recovery verification and on-call operations
